**2000 STATUS REPORT  
PESTICIDE CONTAMINATION PREVENTION ACT**

**EXECUTIVE SUMMARY**

**PURPOSE**

The provisions of Food and Agricultural Code (FAC) section 13144(b) require the Department of Pesticide Regulation (DPR) to annually report to the Legislature, the Office of Environmental Health Hazard Assessment, and the State Water Resources Control Board information regarding the status of the ground water protection data call-in of pesticidal active ingredients registered for agricultural use, the pesticide active ingredients with data exceeding specific numerical values (SNVs), and sales and use information. The ground water protection data for each active ingredient include information on certain physical and chemical properties and environmental fate. Active ingredients with properties that exceed the SNVs established by DPR are considered to have the potential to contaminate ground water. Active ingredients exceeding the SNV criteria are listed with the information on the reported sale and use in California.

**BACKGROUND**

The Pesticide Contamination Prevention Act (PCPA) of 1985 established a set of data requirements for identifying and tracking potential and actual ground water contaminants. The PCPA directed DPR to establish SNVs and compare the data as a basis to estimate their relative risk to ground water and to undertake a process to determine whether they have contaminated ground water. The PCPA establishes procedures for reviewing chemicals found in ground water or in soil as a result of legal agricultural use and for modifying or canceling use of such chemicals.

Under the data call-in provisions of the PCPA, California registrants of agricultural use pesticides must provide DPR with data on physical and chemical properties and environmental fate of the active ingredients in their products. Based on this information, DPR identified active ingredients with data that meet or exceed the SNVs for water solubility, soil adsorption, hydrolysis half-life, aerobic soil metabolism half-life, and anaerobic soil metabolism half-life. Since the enactment of the PCPA, the ability to establish an SNV for field dissipation could not be scientifically determined.

Active ingredients that meet or exceed criteria for SNVs and are labeled for agricultural uses are placed on the Ground Water Protection List (GWPL) found in Title 3 of the California Code of Regulations. The GWPL consists of two sublists. One sublist consists of chemicals that meet the conditions specified in FAC section 13145(d). These chemicals must also have pesticide product labels that require or recommend that the application method be by chemigation or by application to or injection into the soil or that application be followed by flood or furrow irrigation within 72 hours. The second sublist consists of chemicals that have been detected in ground water or soil in California pursuant to FAC section 13149. DPR takes immediate regulatory measures for these chemicals under the PCPA.

## **REPORT SUMMARY**

This report complies with the requirements of the Food and Agriculture Code section 13144(b). The first section lists the status of the remaining active ingredient and whether required ground water protection data have been submitted. The report lists 524 active ingredients that were identified in 1986 as being registered for agricultural use. However, 377 compounds are not subject to the data call-in for one or more of the following reasons: they are used indoors, they are used in ways that would not result in contact with the soil, they are applied in amounts below limits of detection, they occur naturally in soil, or they are no longer registered for agricultural use in California.

Currently, there are 147 pesticidal active ingredients subject to the data call-in compared to 150 in the 1999 report. For the pesticides subject to the data requirements, the report details which studies have been received, the studies to be completed and submitted to DPR, and study requirements for which chemical firms have not submitted adequate data.

## **CONCLUSION**

Over the past seven years, progress has continued toward completing the data call-in for studies required under PCPA. Since PCPA requires that up to 11 studies be submitted for each active ingredient through the data call-in, the 147 active ingredients required the submission of more than 1,600 studies.

By December 2000, DPR determined that 146 active ingredients had adequate studies on file (i.e., no data gaps). The registrant for the agricultural use of the remaining ingredient, chlorthal-dimethyl, is in the process of selling its product line and the buyer will incur the responsibility of fulfilling the obligations of the PCPA.

## 2000 STATUS REPORT PESTICIDE CONTAMINATION PREVENTION ACT

The Pesticide Contamination Prevention Act of 1985 requires that the Department of Pesticide Regulation (DPR) provide the following information for each economic poison registered for agricultural use. The information is provided to the Legislature, the Office of Environmental Health Hazard Assessment, and the State Water Resources Control Board.

1. A list of each active ingredient, other specified ingredient, or degradation product of an active ingredient of an economic poison for which there is a ground water protection gap.
2. A list of each economic poison that contains an active ingredient, other specified ingredient, or degradation product of an active ingredient that is greater than one or more of the numerical values established pursuant to the Act or is less than the numerical value in the case of the soil adsorption coefficient in both of the following categories:
  - (a) Water solubility or soil adsorption coefficient ( $K_{oc}$ ); and
  - (b) Hydrolysis, aerobic soil metabolism, anaerobic soil metabolism, or field dissipation.
3. Provide for each economic poison listed pursuant to number 2 (if information is available), the amount sold in California during the most recent year (for which sales information is available), where and for what purpose the economic poison was used, and when this information is available in the *Pesticide Use Report*.

The information is presented in two sections. The section titled "Report of Active Ingredients Subject to Data Requirements Pursuant to the Pesticide Contamination Act" lists the active ingredients registered for agricultural use in alphabetical order and shows the status of the data for each study required by the Act. The section titled "Report on Economic Poisons Exceeding Specific Numerical Values Pursuant to the Pesticide Contamination Prevent Act" lists the properties of pesticides associated with leaching potential and the specific numerical values established by DPR.

**REPORT ON ECONOMIC POISONS  
EXCEEDING SPECIFIC NUMERICAL VALUES  
PURSUANT TO THE PESTICIDE CONTAMINATION PREVENTION ACT**

This report evaluates the potential of pesticide active ingredients to leach to ground water. Section 13144 (a) of the Pesticide Contamination Prevention Act of 1985 (PCPA, Stats. 1985, Ch. 1298, § 1) requires the Department of Pesticide Regulation (DPR) to establish thresholds known as specific numerical values (SNVs) for six physicochemical characteristics of environmental fate: water solubility, soil adsorption coefficient ( $K_{oc}$ ), hydrolysis half-life, aerobic and anaerobic soil metabolism half-lives, and field dissipation half-life. These parameters are presumed by the PCPA to correlate with the potential of a pesticide to leach to ground water. Water solubility and  $K_{oc}$  are considered indicators of the mobility of an active ingredient within the soil, while the half-lives for hydrolysis, aerobic and anaerobic soil metabolism, and field dissipation are considered indicators of the persistence of the chemical in the soil.

Statistical comparison procedures were used to calculate the SNVs. Based on nationwide ground water studies, a list of pesticide active ingredients was created and separated into two groups: 1) chemicals that had been detected in ground water as a result of legal agricultural use (leachers), and 2) chemicals that had been sampled for and not found in ground water as a result of agricultural non-point source contamination (non-leachers). Estimates of the physicochemical parameter values for the chemicals in each group were determined from data available in the open literature and from DPR-approved studies submitted by pesticide registrants in fulfillment of the data call-in requirements in section 13143. The data for each of the parameter values were tested for their usefulness in discriminating between leachers and non-leachers by determining whether the means of the two groups were significantly different. The tests showed that the means of the data for water solubility, hydrolysis half-life,  $K_{oc}$ , and the anaerobic soil metabolism half-life for chemicals identified as leachers were significantly different from the means of chemicals identified as non-leachers. The SNVs for these properties were established as those values that would identify as leachers 90 percent of the chemicals found in ground water due to agricultural use. The means of the two groups for aerobic soil metabolism, however, were not significantly different. Because the PCPA requires DPR to establish an SNV for each physicochemical property, the SNV for the aerobic soil metabolism half-life was set at a value that minimized its importance in the discrimination procedure. A complete description of the

procedures used to calculate the SNVs can be found in the document entitled *The Pesticide Contamination Prevention Act: Setting Specific Numerical Values*, published in 1986. Three subsequent revisions were published in 1988, 1989, and 1991 entitled *Setting Revised Specific Numerical Values*. The SNVs established by DPR are reevaluated periodically to incorporate new data into the calculations. The SNVs currently in regulation (Titles 3 and 26, California Code of Regulations, § 6804) are:

(a)	Water solubility	3 ppm
(b)	Soil adsorption coefficient ( $K_{oc}$ )	1900 $\text{cm}^3/\text{g}$
(c)	Hydrolysis half-life	14 days
(d)	Aerobic soil metabolism half-life	610 days
(e)	Anaerobic soil metabolism half-life	9 days

The SNV for field dissipation half-life has not yet been established. The SNVs are required by section 13144 of the PCPA to be at least equal to those established by the United States Environmental Protection Agency (USEPA). To date, the USEPA has not established any SNVs.

Pursuant to section 13144(b) of the Act, pesticide active ingredients are tested against the SNVs and are placed on a list of candidates as potential leachers if both the mobility and persistence parameter values exceed (or are less than in the case of the  $K_{oc}$ ) the SNV for water solubility or  $K_{oc}$  and the SNV for the hydrolysis or aerobic soil metabolism or anaerobic soil metabolism or field dissipation half-life. If a potential leacher has a pesticide label which requires or recommends the application method to be by application to or injection into the soil or by chemigation or that application is to be followed by flood or furrow irrigation within 72 hours, then the chemical is placed on the Groundwater Protection List (Food & Agr. Code § 6800 (b)). Table 1 is a list of candidate potential leachers that are contained in currently registered economic poisons and their respective mean physicochemical parameter values.

There are five new active ingredients on the 2000 list compared to the 1999 list:

dodine  
fenhexamid  
kresoxim-methyl

Dodine, fenhexamid, and kresoxim-methyl are fungicides. Pymetrozine is an insecticide, and siduron is an herbicide.

The following active ingredients exceeded the SNVs, but because they are not used in economic poisons currently registered for use in California (registration status as of November 1, 2000), they have not been included in Table 1:

Section 13144(b) also requires DPR to provide, for each active ingredient in Table 1, a list of the amount sold in California, and a list of where and for what purpose the economic poison was used. The 1998 Pesticide Sales Report data are shown in Table 2. Information on the active ingredients and their modes of action can be found in Table 3. The 1999 Pesticide Use Report, the most recent and complete set of data available, are found in Table 4.
